TECHNICAL SUMMARY

API integration specialist with 4+ years at Cox Automotive / Dealertrack leading end-to-end partner onboarding across digital retailing infrastructure. Experience working with and integrating AI into software — including autonomous email agents, embedded LLM assistants, and multi-tenant CRM platforms. Proven ability to bridge engineering, product, and enterprise clients while shipping real software from schema to deployment.

CORE COMPETENCIES

API Integration & Partner Onboarding | REST APIs & Webhooks | Postman | Splunk Log Analysis | SQL
Claude / LLM API Integration | Autonomous Agent Design | OAuth2 | JWT Authentication
React | Node.js | Supabase (Postgres) | Vercel | Twilio (Voice & SMS)
Salesforce CRM | Agile / Rally | Cross-Functional Team Coordination | Technical Pre-Sales Support

EXPERIENCE

Operations Manager | Safe Haven Sober Living | Long Island, NY | August 2019 – Present

Founded and operate a multi-property residential program (100+ beds across 4 properties) under contract with Nassau County Social Services. Served as sole developer and operator — building all internal technology from scratch while managing full facility operations.

- Designed and built SafeHavenCRM — a production full-stack CRM (React, Node.js, Express, Supabase/Postgres, Vercel) managing resident intake, drug test records, rent payments, DSS case worker data, and occupancy across 4 properties; includes bulk import, CSV export, and automated email reminders via Nodemailer and node-cron
- Architected and deployed an autonomous AI email agent using the Claude API and Gmail OAuth2 — classifies inbound inquiries, auto-responds to simple emails, drafts complex replies, and automatically creates CRM lead records from incoming messages
- Built a full agent action layer enabling AI to read live business data (residents, leads, payments, drug tests) and execute write operations back to Supabase via structured JSON tool calls — updating records, adding notes, changing statuses
- Built secure serverless proxy architecture on Vercel: all API keys server-side only, rate-limited endpoints, CORS, and helmet security headers — no credentials exposed to the browser
- Maintained 90%+ occupancy across multiple properties through active leasing management and tenant relations
- Managed budgets, financial reporting, accounts receivable, and vendor contract negotiations across all properties
- Collaborated with Nassau County Social Services to onboard a county-contracted shelter operation, navigating regulatory compliance and licensure requirements

Technical Business Analyst (Partner Integration) | Dealertrack (Cox Automotive) | North Hills, NY | October 2018 – December 2022

Led API-based partner integrations for Dealertrack's digital retailing platform — a SaaS network used by thousands of automotive dealerships nationwide. Served as primary technical point of contact across the full partner lifecycle from pre-sales discovery through production deployment.

- Managed a portfolio of 30+ concurrent partner integrations at any given time — ranging from full loan origination system (LOS) integrations to bank configuration updates — delivering hundreds of implementations over tenure
- Owned XML field mapping between partner systems and Dealertrack's data model; diagnosed and resolved integration failures using Postman API testing and Splunk log analysis
- Delivered pre-sales technical consultations to evaluate partner API requirements, assess integration feasibility, and define scope for digital retailing service implementations
- Managed full project lifecycle using Salesforce and Rally (Agile), tracking deliverables, flagging risks, and escalating blockers to ensure on-time partner go-lives
- Coordinated cross-functionally between engineering, infrastructure, product, and external partner technical teams to unblock integrations and hit committed timelines
- Provided on-call production support for deployments and outages, serving as technical escalation point for live partner incidents

- Facilitated technical upgrades and platform conversions for existing partners, managing change communication across all stakeholders

RECENT PROJECTS — CONSULTING

Case Docket

Full-stack legal case management platform for a traffic and criminal defense law practice

- Built complete case management system in React (Vite) + Supabase (Postgres) + Vercel — case tracking from intake to close with billing ledger and per-client payment balances
- Automated daily court date reminders via Resend email and Vercel Cron Jobs so no hearing ever gets missed
- Built a criminal cases module with task management, document vouchers, and AI case summaries powered by the Claude API — attorney gets a plain-English read on every case at a glance
- Integrated Twilio for direct client SMS from inside the case dashboard

Salty Skins CRM

Guest and retreat operations platform for an active yoga retreat business

- Built a single-dashboard CRM for guest tracking, retreat bookings, arrivals, and retreat-level revenue — replacing a patchwork of spreadsheets
- Bookkeeping and financial reporting integrated directly alongside operational data — no double entry across systems
- Stripe integration for booking and deposit collection with payment status tracked per guest

EDUCATION

B.S. in Computer Information Systems | Quinnipiac University, School of Business | Hamden, CT | May 2018

Cum Laude — GPA 3.5 — Dean's List
